

Sirs: It is my belief that XM Satellite Radio has a constitutional right to broadcast traffic & weather conditions under the first amendment. If this is not so, then how do all these other broadcasters do the same ??

What's the difference if by AM--FM---Satellite --TV ---or any other broadcast means.....???? It's an informational type broadcast that can only aid & help the traveling public. It is in the best interests of the People of this great country that they be allowed to receive this information by any & all methods.

Thank you,

Gerald B. Rickard
